

SAFEORBIT

AUTONOMOUS YIELD & LIQUIDITY GENERATION PROTOCOL

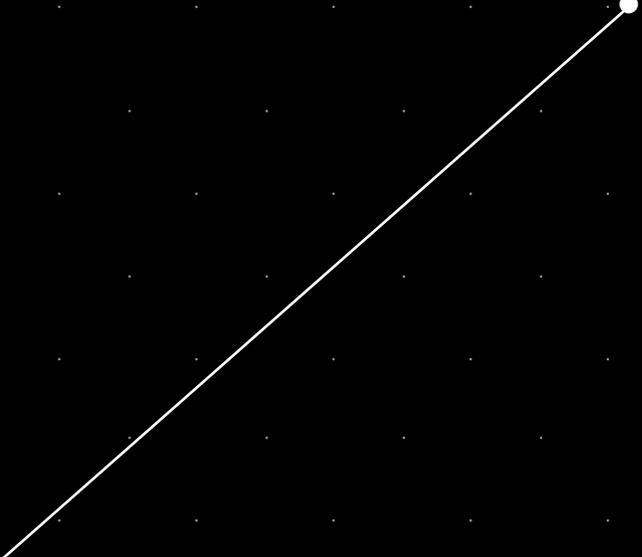

WHAT IS SAFEORBIT?

SAFEORBIT is an autonomous Yield & Liquidity Generation Protocol based on Binance Smart Chain.

With this model, every single **PANCAKESWAP** transaction comes with a 10% tax. 3% of the tax gets distributed directly to **SAFEORBIT** holders without gas fee while the remaining 7% are automatically added to liquidity.

You earn just by holding **SAFEORBIT** in your wallet while the total supply decreases over time!

SAFEORBIT MISSION STATEMENT

A very common problem in the DEFI space is that in order to augment liquidity for a coin, you need to stake your coins or provide liquidity in LP pools in order to achieve high APY returns.

The problem with this is that in order to provide liquidity you need to double your financial contribution to the pool and in addition put yourself at risk to impermanent loss. SafeOrbit has come up with a solution to the problem where you only need to cold stake (hold) your coins in your wallet. This eliminates the fees for staking and un-staking as well as claiming your rewards.

HOW SAFEORBIT WORKS?

The SAFEORBIT protocol functions from static rewards to holders through static reflection. This allows constant gains and growth of your token balance.

Buy and sells of SAFEORBIT generate autonomous yield rewards. What this does is reduce the sell pressure by allowing holders to increase their holdings directly from each transaction. The reflect mechanism encourages holders to HODL onto their tokens to garner higher rewards which are based upon a percentage carried out and dependent upon the total tokens held by the owner. This allows a permanently increasing price floor while earning additional SAFEORBIT tokens.

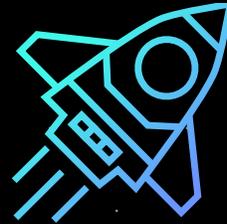

TOKEN ECONOMICS

TOTAL SUPPLY

1,000,000,000,000,000

BURNED TOKENS

**474,509,042,679,398
(47.45% OF TOTAL SUPPLY)**

CIRCULATING SUPPLY

525,490,957,320,602

LIQUIDITY LOCKED

**FOR 6 MONTHS ON
PANCAKESWAP**

Why only 6-months? With the increasing change in protocols on PANCAKESWAP, the team felt it made sense to lock it for 6 months and have the option to switch protocols in case of exchange upgrades or moving to different platforms.

After the 6 months, the community will decide whether we lock the Liquidity back up or move it. With the latest upgrade on PANCAKESWAP to version two, this proved to be a winning strategy.

F E A T U R E S

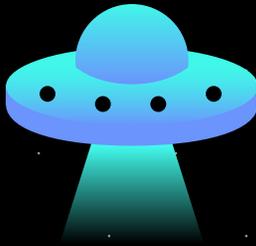

SAFEORBIT is an auto-staking smart contract. Every time someone buys or sells, there is a 10% fee. 7% of that fee goes to Liquidity and 3% goes to all the holders. The more you hold, the larger your amount. This structure is designed to pay the holder endless yields as long as they stay holding and to provide stable and consistent gains on the long term.

AUTO LIQUIDITY GENERATION

The mechanism in the contract to provide automatic liquidity to the BNB/SAFEORBIT pool is what makes everything work.

This is key to the long-term success of the project. 7% of every buy and sell of the token is added to the LP pool creating a frictionless and consistent token. This also controls the price by recycling every buy or sell back to the pool. Unlike other projects where a percentage of the fees goes to the dev team, in SAFEORBIT the community of holders and the LP receive 100% of the fees.

PASSIVE YIELD GENERATION

Holders of SAFEORBIT earn 3% passive yield generated through sellers.

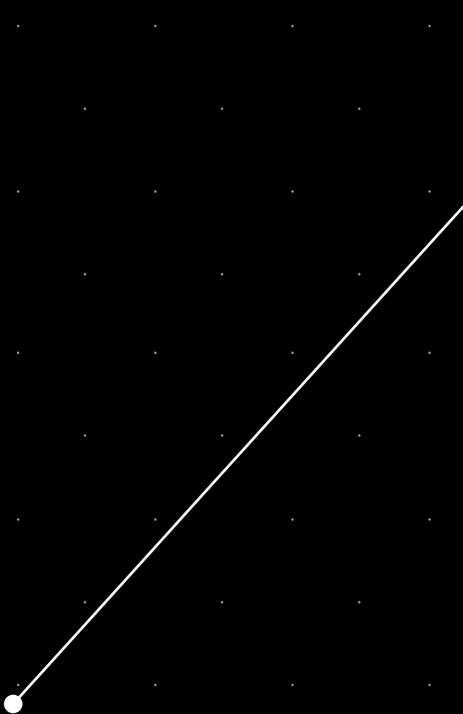

Trough reflection every transfer will incur a fee, which is automatically and instantly distributed amongst all token holders. You just need to hold SAFEORBIT in your wallet in order to receive a 3% passive yield of every transaction of any seller or buyer. Additionally, the smart contract can block PANCAKESWAP from earning yield. This ensures that 100% of the collected fees go straight back to the holders.

DEFLATIONARY

SAFEORBIT will do strategical burn to reduce the overall supply of the token.

The amount of all burns will be completely transparent to the community and posted on our page and social media platforms so it can easily be tracked. The purpose of the burn is to reward those holding long term while additionally modifying the price to a less volatile state.

SPECIAL NFT INTEGRATION

SAFEORBIT uses NFT technology to increase the value and promote holding of its tokens.

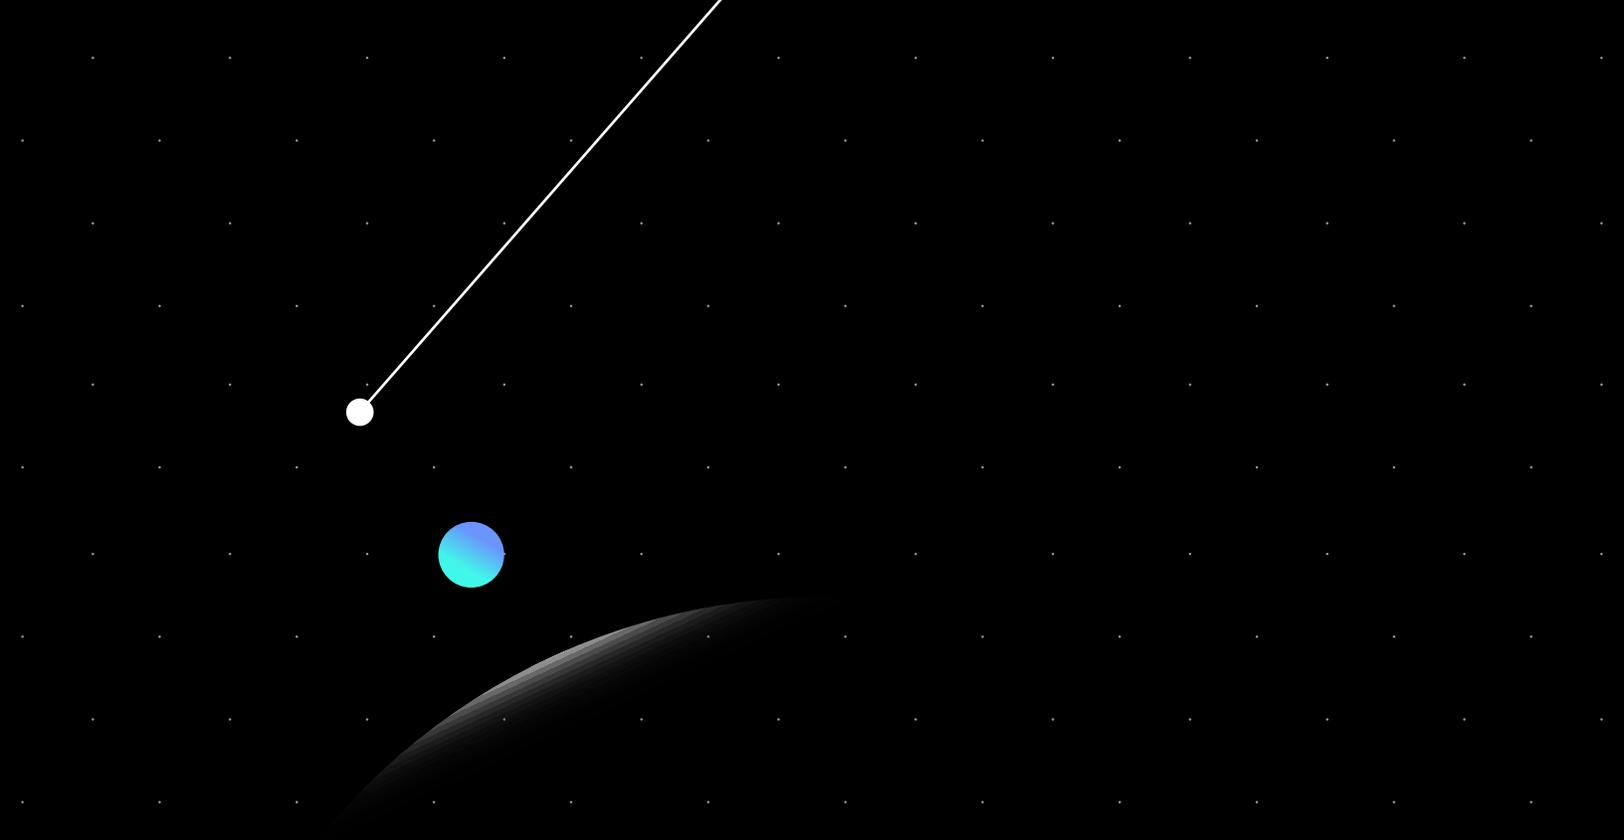

The **SAFEORBIT** NFTs can be safely stored and easily transmitted without the worry of copy or duplication of the item.

SAFEORBIT has already started to create a specially designed NFT collection for the project. The first NFTs are ready to be deployed to the community.

ROAD MAP

- JANUARY - MARCH 2021** Concept and creation of the **SAFEORBIT Protocol [DONE]**
- APRIL 2021** **SAFEORBIT Launch [DONE]**
 - Launch of the Smartcontract [DONE]
 - PANCAKESWAP** Liquidity Pool Creation and Lock of Liquidity [DONE]
 - Updated information on **BSCSCAN [DONE]**
 - Listing on **COINMARKETCAP [DONE]**
 - Listing on **BLOCKFOLIO [DONE]**
- MAY 2021** Listing on **COINGECKO [DONE]**
 - Redesign of Website [DONE]
- JUNE 2021** **CEX Listing [DONE]**
- JULY - AUGUST 2021** Audit
 - Introduction of **NFTs** for holders of **SAFEORBIT**
 - SAFEORBIT NFT Marketplace**
- SEPTEMBER - OCTOBER 2021** Additional **CEX/DEX Listing**
 - Charitable Fundraisers
 - Implementation and expansion of **SAFEORBIT** to the **Matic (Polygon) Network**
 - Continue burn of tokens
- NOVEMBER - DECEMBER 2021** Community Governance
 - Addition of **SAFEORBIT** to **Avalanche Network**
 - TO THE MOON!**
More updates to come...

SAFEORBIT COMMUNITY

The **SAFEORBIT** endeavor is a community driven token. All changes to the fee distribution are decided by the community through voting. The team will hold votes on all financial decisions revolving the project.

ALL ONBOARD, WE GO TO THE ORBIT TOGETHER!
